

# Metrology in Industry

## Table of Contents

---

### 1. Analysis of the metrological requirements needed to ensure quality

- 1.1. Introduction
- 1.2. Definition of the objectives
- 1.3. Choice of the method of measurement
- 1.4. Choice of the means of measurement
- 1.5. The traceability of the measurements

### 2. Organization of metrology: industrial, scientific, legal

- 2.1. A metrological organization: why?
- 2.2. Metrology: how?
- 2.3. Scientific and technical metrology
- 2.4. Legal metrology

### 3. Mastering measurement processes approach to the setting up of a metrology function

- 3.1. What to do at the beginning?
- 3.2. Goals and role of the measurement management system - metrological function
- 3.3. The measurement processes
- 3.4. Management of the measuring equipment
- 3.5. Setting up a metrological structure within the firm
- 3.6. Suggested approach for setting up of a metrology function
- 3.7. Bibliography

### 4. Handling of bank of measuring instruments

- 4.1. Acquaintance with the bank
- 4.2. Metrological policy of the firm
- 4.3. Drafting of the documents
- 4.4. Physical handling of the measuring instruments
- 4.5. Follow-up of the measuring instruments over time
- 4.6. Software for the handling of the means of measurements

### 5. Traceability to national standards

- 5.1. Introduction
- 5.2. Definitions
- 5.3. Traceability chains
- 5.4. Traceability
- 5.5. Calibration
- 5.6. Verification
- 5.7. Use of calibration and verification results
- 5.8. Particular cases
- 5.9. Metrology in chemistry and physical methods of chemical analysis
- 5.10. Assessment of traceability
- 5.11. Bibliography

## **6. Calibration intervals and methods for monitoring the measurement processes**

- 6.1. Normative requirements
- 6.2. Methods for monitoring the instruments in use - general criteria
- 6.3. The determination of the calibration intervals
- 6.4. Bibliography

## **7. Measurements and uncertainties**

- 7.1. Introduction
- 7.2. Measurement of physical quantity
- 7.3. Analysis of the measurement process
- 7.4. Modeling of the measurement process
- 7.5. Assessment of the uncertainty of the input quantities
- 7.6. Calculating the combined uncertainty on the result
- 7.7. Use of the performances of the method (repeatability and freedom of bias) to assess the uncertainty of the measurement result
- 7.8. Reporting of the measurement result
- 7.9. Example
- 7.10. Bibliography

## **8. The environment of measuring**

- 8.1. The premises
- 8.2. The personnel
- 8.3. The documentation
- 8.4. Bibliography
- 8.5. Appendix

## **9. About measuring**

- 9.1. Preliminary information
- 9.2. Choice of a measuring principle
- 9.3. Practising in metrology
- 9.4. Expression of the results
- 9.5. What qualities does a metrologist require?

## **10. Organisation of metrology at Solvay Research and Technology**

- 10.1. Presentation of the company
- 10.2. Organization of the metrology sector
- 10.3. Metrology

## **11. Metrology within the scope of the ISO 9001 standard**

- 11.1. Introduction
- 11.2. Presentation of the evolution of the standard
- 11.3. Measurement control process
- 11.4. The ISO 9001 (2000) standard step by step
- 11.5. Conclusion

## **12. Training for the metrology professions in France**

- 12.1. The metrology function in a firm's strategy
- 12.2. Metrology professions
- 12.3. Initial training
- 12.4. Continuing education
- 12.5. Long-lasting training courses
- 12.6. The teaching of metrology in secondary schools
- 12.7. Prospects for the development of long-lasting training courses
- 12.8. Bibliography
